

TMDL IMPLEMENTATION PLAN

SATILLA RIVER BASIN

Overview of Hurricane Creek Watershed Plan

The Hurricane Creek watershed (HUC10 # 0307020110) is located in the Satilla River basin in Southeast Georgia's Bacon County. The local governments involved in improving the Hurricane Creek Watershed are Bacon County and the city of Alma. Also involved in the effort are the Southeast Georgia Regional Development Center (SEGa RDC) in Waycross and the Georgia Department of Natural Resources' Environmental Protection Division (GADNR-EPD).

Having been determined to be an impaired water body by the State of Georgia, Hurricane Creek from downstream of Little Creek to Ten Mile Creek near Alma is classified as *not supporting* its designation as fishing water and has an impacted area of twenty miles. The Total Maximum Daily Load (TMDL) Implementation Plan for the Hurricane Creek watershed is a collaborative effort of the GADNR-EPD and the SEGa RDC. A TMDL is the calculation of the maximum amount of a particular pollutant that a water body, river, or stream can receive and still be safe, healthy, and meet Georgia water quality standards.

According to the Hurricane Creek Watershed Total Maximum Daily Load (TMDL) Implementation Plan, the water body suffers from one impairment, Dissolved Oxygen (DO). To improve the water quality of Hurricane Creek, the TMDL Implementation Plan suggests a 20% reduction in nonpoint source contamination resulting in a decrease in the water bodies' total organic carbon, total nitrogen, and total phosphorus.

Contributors to Impaired Dissolved Oxygen in Hurricane Creek

There are numerous point and nonpoint sources of oxygen demanding substances in the Hurricane Creek watershed. The point sources include wastewater discharge from two water pollution control plants (GAU050130 and GA0032328) as well as storm water runoff from industries (NOI_#03115 and NOI_#01200). There is also permitted discharge into the creek with no required load reduction (NPDES GA0024619). The nonpoint sources include surface storm runoff of agriculture and residential fertilizer and chemicals as well as runoff containing organic material from agricultural and silvicultural developments and operations. Also, uncovered manure piles, runoff from feedlots, access to the waterway by livestock, land disturbing activities, laundry and automotive care products, leaking septic systems, improper methods of trash collection and disposal, and rural and urban development are all contributing to the DO impairment in Hurricane Creek.

In addition to the aforementioned sources, many Southeast Georgia streams, including Hurricane Creek, are slow-flowing, "blackwater" bodies. The dark water coloration is due to adjacent wetland areas having organically rich bottom sediments that flow to the stream, as well as leaf litterfall. These factors also have an effect on DO.

Developing the Plan and Stakeholder Involvement

The SEGaRDC has worked closely with GADNR-EPD to develop the TMDL Implementation Plan for the Hurricane Creek watershed. Each agency has been diligent in making sure that the strategy includes an action plan, education/outreach activities, stakeholders, pollutant sources, and potential funding resources. Stakeholders, including local government officials, landowners, industrial representatives and interest groups, have played a vital role in the plan's preparation. In fact, needed input was received during a public meeting held November 26, 2002, at the Bacon County Agriculture Complex. Stakeholders offer valuable information and data regarding their community and the impaired water bodies and can provide insight and/or implement management measures.

TMDL IMPLEMENTATION PLAN

SATILLA RIVER BASIN

Overview of Hurricane Creek Watershed Plan

Monitoring Plan

The monitoring plan will determine the effectiveness of the target TMDL and the management measures being implemented to meet water quality standards. Water quality testing by GADNR-EPD is scheduled to begin in 2003. Presently, the City of Alma is performing water quality testing and GADNR-EPD is participating in a comprehensive nutrient management plan. A storm water pollution prevention plan is proposed to begin development in 2003. Also, the Georgia Forestry Commission will begin aerial monitoring of forestry best management practices in 2003.

Management Practices

The Implementation Plan lists management measures that have been or will be implemented to achieve water quality standards and the load reductions established in the TMDL. The management measures, including regulatory or voluntary actions or other controls by governments or individuals, specifically apply to the Dissolved Oxygen in the Hurricane Creek watershed. The following management practices are included in the TMDL Implementation Plan:

- Domesticated and commercial animal/livestock excrement disposal and management program
- CAFO regulations land application system permits
- Herbicide and pesticide poison care disposal and management care program
- Stream management zones
- Septic tank management program
- Agriculture and forestry best management practices
- Nutrient management program
- Power equipment, commercial, industrial, and personal product care disposal and management program
- Household cleaner disposal and management program
- Sewer management program
- Spill/discharge control and cleanup program
- Best management practices monitoring
- Storm water pollution prevention plan

Projected Attainment Date

The projected date to attain and maintain water quality standards in the Hurricane Creek watershed is 2012, which is within 10 years of the acceptance of the TMDL Implementation Plan by the Environmental Protection Division.

Conclusion

TMDL Implementation Plans are platforms for establishing a course of actions to restore the quality of impaired water bodies in a watershed. They are intended as a continuing process that may be revised as new conditions and information warrant. Procedures will be developed to track and evaluate the implementation of the management practices and activities identified in the plans. Once restored, appropriate management practices and activities will be continued to maintain the water bodies. Through this intergovernmental partnership and the collaboration with the private stakeholders, the Hurricane Creek watershed TMDL Implementation Plan is sure to succeed.

STATE OF GEORGIA TMDL IMPLEMENTATION PLAN WATERSHED APPROACH SATILLA RIVER BASIN

TMDL Implementation Plans are platforms for establishing a course of action to restore the quality of impaired water bodies in a watershed. They are intended as a continuing process that may be revised as new conditions and information warrant. Procedures will be developed to track and evaluate the implementation of the management practices and activities identified in the plans. Once restored, appropriate management practices and activities will be continued to maintain the water bodies. **With input from appropriate stakeholder groups, a TMDL Implementation Plan has been developed for a cluster of impaired waterbodies and the corresponding pollutants.** The impaired streams are located in the same sub-basin identified by a HUC10 code (Figure 1).

This Implementation Plan addresses an action plan, education/outreach activities, stakeholders, pollutant sources, and potential funding resources affecting the watershed. In addition, the Plan describes (a) regulatory and voluntary practices/control actions (*management measures*) to reduce target pollutants, (b) milestone schedules to show the development of the management measures (*measurable milestones*), (c) a monitoring plan to determine the efficiency of the management measures and measurable milestones, and (d) criteria to determine whether substantial progress is being made towards reducing pollutants in impaired waterbodies. The overall goal of the Plan is to define a set of actions that will help achieve water quality standards in the state of Georgia. Following this section is information regarding individual impaired streams.

INFORMATION/EDUCATION/OUTREACH ACTIVITIES

An education/outreach component will be used to enhance public understanding of and participation in implementing the TMDL Implementation Plan.
List of all previous and planned information/education/outreach activities.

Responsible Organization Or Entity	Description	Impacted Waterbodies*	Target Audience	Anticipated Dates (MM/YY)
Southeast Georgia Regional Development Center, Fredrick E. Carpenter Jr.	Ordinance/Regulation Review for the City of Alma and Bacon County.	1	Citizens and Local Government Officials	12/2004
Environmental Protection Division	Best Management Practices (BMPs) for Industry	1	Business Community	Ongoing
Environmental Protection Division	Best Management Practices (BMPs) for Water Quality	1	Business Community	Ongoing
Georgia Forestry Commission, Stan Moore	Best Management Practices (BMPs) for Forestry	1	Forestry Industry	Ongoing
NRCS (7 Rivers RC&D) and University of Georgia Extension Service, Luther Jones	Best Management Practices (BMPs) for Agricultural	1	Farming Industry	Ongoing
Southeast Georgia Regional Development Center (RDC), Georgia DNR/EPD	Southeast Georgia RDC is assisting local governments with a Water Committee. The Committee has been meeting for 9 months. One project that the committee would like to undertake is an educational video tape for Residential and Urban (BMP's). The committee believes that the key to quality water is behavior modification through education. This will be a collaborative effort between Georgia DNR/EPD, Southeast Georgia RDC, Water Committee, and Local Governments.	1	Local Governments and Citizens	12/2004
Save Our Satilla, Gloria Taylor	Satilla River Basin Environmental Group	1	Citizens	On-going
Southeast Georgia RDC, Fredrick E. Carpenter Jr.	Southeast Georgia RDC with the help of 7 Rivers RC&D, will assist the City of Alma, Bacon County, and Pierce County with a 319(h) grant. The grant will be for the delineation of failing septic systems. Ware County is developing and planning to provide sewage for the county residents.	1	Citizens	12/2004
Adopt-A-Stream	Will assist Al Browning in the introduction of the Adopt-A-Stream program into Bacon, Pierce and Ware County. Mr. Al Browning is an Ecology teacher at Berrien County High School. He can be reached at (229) 686-7428.	1	Citizens	03/2003

STAKEHOLDERS

EPD encourages public involvement and the active participation of stakeholders in the process of improving water quality. Stakeholders can provide valuable information and data regarding their community and the impaired water bodies and can provide insight and/or implement management measures.

List of local governments, agricultural organizations or significant landholders, commercial forestry organizations, businesses and industries, and local organizations including environmental groups and individuals with a major interest in this watershed.

Watershed: Hurricane Creek
HUC10: #0307020110

WATER BODIES/STREAMS COVERED IN THIS PLAN

These impaired streams are located in the same sub-basin identified by a HUC10 code. Most of the information contained in this section comes from the 303(d) list and has been completed by employees of the EPD Water Protection Branch. Data that placed the streams on the 303(d) list will be provided upon request.

Waterbody Name #1	Location	Miles/Area Impacted	Use Classification	Partially Supporting/ Not Supporting (PS/NS)
Hurricane Creek	Downstream of Little Creek to Ten Mile Creek near Alma	20 miles	Fishing	NS
Primary County	Secondary County	Second RDC		Source (Point/ Nonpoint)
Bacon	Jeff Davis			Nonpoint
Pollutants	Water Quality Standards	Required Load Reduction	TMDL ID	Date TMDL Established
Contributing to DO	DO: 5 mg/L (daily)-4 mg/L (minimum) Natural Water Quality Standard DO: 3.776 mg/L (minimum)	Nonpoint: 20% TOC, TN, TP		December 2001

TOC=Total Organic Carbon (lb/yr), TN=Total Nitrogen (lb/yr), TP=Total Phosphorus (lb/yr)

POLLUTANT SOURCES

It is important to recognize the potential source(s) causing water quality impairment. Each source must be controlled to comply with target TMDL/Load Allocations for each pollutant. Included is a description of how the sources contribute to the impairment and the waterbody that is impaired.

List of major nonpoint source categories and sub-categories or individual sources (Urban Runoff, Agriculture, Forestry, Municipal Sewage Treatment Plant)

Pollutant	Sources of Pollutants	Description of Contribution To Impairment	Impacted Waterbodies*
DO	Discharges from Water Pollution Control Plant (GAU050130)	Wastewater discharge and possible leakage.	1
DO	Discharges from Water Pollution Control Plant (GA0032328)	Wastewater discharge and possible leakage.	1
DO	Storm water runoff from Industries (NOI_# 03115)	Possible introduction of various chemicals and sediment from stormwater runoff.	1
DO	Storm water runoff from Industries (NOI_# 01200)	Possible introduction of various chemicals and sediment from stormwater runoff.	1
DO	NPDES GA0024619	Permitted discharge into creek with no required load reduction. Possible introduction of industrial thermal effluent.	1
DO	Chemical/Fertilizer Applications, Silvicultural and Farming application of chemicals by aerial and broadcast means.	Chemical/Fertilizer (Nitrates and Phosphates) runoff increases the natural eutrophication rates in streams and creeks, and contributes to impaired DO by producing a carbonaceous chemical reacting with O ² .	1
DO	Organic Materials from Residential, Agricultural and Silvicultural Developments and Operations.	Runoff from residential yards, city and county mowing operations, hay fields, row crop production, leaves, branches and chipping materials that are not properly secured or disposed are washed away into nearby drainage systems and/or waterways.	1
DO	Lateral Leaf Litter	Decrease in Oxygen due to decomposition of organic materials.	1
DO	Wetlands	Wetland areas often contribute to high organic (leaf litterfall, decomposing plants) loading, slow flows (due to minimum topographical relief) and elevated temperatures in a surface water system that result in conditions where the dissolved oxygen is naturally lower and cannot meet the numeric criteria without reductions in the natural nutrient and carbon loads. Usually reduction in natural forest or wetlands contributions is not feasible, practicable or desirable through conventional best management practices.	1

Pollutant	Sources of Pollutants	Description of Contribution To Impairment	Impacted Waterbodies*
DO	Uncovered manure piles	Introduced into the waterway by the following methods: (1) Wind, and (2) runoff due to the introduction of water onto the pile. These nutrient enrich materials are then introduced into the waterway by the above means and aerobic microorganisms are needed to further breakdown the materials lending to decreased oxygen amounts in the waterway.	1
DO	Access to waterways by livestock	Manure, feed and other materials are either transported on hooves, introduced into the stream by drinking livestock defecation, and/or feed is introduced into the waterway by runoff due to well-traveled paths.	1
DO	Manure from livestock operations	Runoffs from livestock feedlots are introduced into the waterway by rainfall or feedlot maintenance operations.	1
DO	Sediments	Sediments slow the rate of flow and increase the temperature of the water, depleting the amount of available oxygen through mechanical alteration of the waterway.	1
DO	Land Disturbing Activities: (1) Construction Sites, (2) Infrastructure Development and Maintenance	Uncheck runoff from construction sites: (1) Leaking portable waste containers, (2) Improperly disposed waste materials, and (3) Introduction of sediments into waterways. (Sediments change the mechanics of the waterway by reducing flow rate and increasing water temperatures)	1
DO	Laundry Care Products	Detergents are emptied into septic systems, onto surface, or deposited into unapproved drainage/septic systems. During periods of precipitation, these chemicals are washed into nearby drainage systems and/or waterways.	1
DO	Spill/Discharges of Raw Sewage	Spillage, unauthorized discharges, and cleansing of contaminated waste vehicles. These untreated materials are left on the surface to be introduced into the drainage system or waterway by precipitation or during the cleansing of equipment or collection apparatuses or containers.	1
DO	Improper Methods of Trash Collection and Disposal	Spillage and incorrect disposal techniques place substances on surfaces to be washed into waterway during precipitation.	1
DO	Collection and Disposal of Petroleum Products and Materials related to the repair of Gasoline and Diesel Equipment.	Fluids and materials associated with mechanical repairs and chemical absorbent materials that are not properly disposed of are left on surfaces to be washed into drainage system or waterways.	1
DO	Leaking Septic Systems	Effluent leakage due to overflowing sewage systems and leaking collection lines.	1
DO	Manufacturing/Industrial Discharges	Thermal discharges raise the temperature of water, lowering its oxygen content.	1
DO	Residential, Agricultural and Silvicultural Chemical/Fertilizer applications	Chemical/Fertilizer runoff increases the natural eutrophication rates in streams and creeks, and contributes to DO by producing a carbonaceous chemical reacting with O ² .	1

Pollutant	Sources of Pollutants	Description of Contribution To Impairment	Impacted Waterbodies*
DO	Leaking Septic Systems	Effluent leakage due to overflowing sewage systems and leaking collection lines.	1
DO	Rural and Suburban Development	Unchecked runoff through stormwater sewers: (1) Discharges of sanitary waste and (2) Improper disposal of waste materials.	1
DO	Organic Materials From Lawns, City and County Right-of-Ways	Yard trimmings, leaves, branches and chipping materials that are not properly secured or disposed are washed away into nearby drainage systems and/or waterways.	1
DO	Automotive Product Care	Fluids, materials associated with auto repairs and chemical absorbent materials that are not properly disposed of are placed on surfaces to be washed into drainage system or dumped illegally into drainage systems.	1
DO	Organic Materials from Agricultural and Silvicultural Developments and Operations	Runoff from hay fields, row crop production, leaves, branches and chipping materials that are not properly secured or disposed are washed away into nearby drainage systems and/or waterways.	1
DO	Direct Leaf Litter	Direct introduction of leafs falling into waterways from overhanging branches, limbs and trees. These leaves settle at the bottom and require further breakdown by aerobic microorganisms.	1
DO	Industrial and Residential Storm Water Runoff	Storm water runoff is part of a natural hydrologic process. However, human activities, particularly urbanization and associated industrial activities, can alter natural drainage patterns and add pollutants to rivers, and streams. Impact is a decline in fish and restrictions on swimming.	1
DO	Forested Woodlands	Heavily forested and wetlands areas often contribute to high organic (leaf litterfall, decomposing plants) loading and slow flows (due to minimum topographic relief) in a surface water system that result in conditions where the dissolved oxygen is naturally lower and cannot meet the numeric criteria without reductions in the natural nutrient and carbon loads. Usually reduction in natural forest or wetlands contributions is not feasible, practicable or desirable through conventional best management practices.	1
DO	Feedlot Operations	Animals are confined in large groups in limit space. Large amounts of animals waste are produced. Maintenance, daily cleansing of feedlot, occurs daily to eliminate health problems. Pollutant may enter waterway either by runoff from overflowing lagoons or by runoff from piled manure that is left uncovered.	1

MANAGEMENT MEASURES, MEASURABLE MILESTONES AND SCHEDULE

(i.e. Local codes and ordinances, Erosion and Sedimentation Control, Storm Water Management, Local water resource monitoring)

The following table lists management measures that have been or will be implemented to achieve water quality standards and the load reductions established in the TMDL. The management measures, including regulatory or voluntary actions or other controls by governments or individuals, specifically apply to the pollutant and the waterbody for which the TMDL was written. A description is provided of how these management measures are/will be accomplished through reliable and effective delivery mechanisms, and how these management measures are/will help achieve the target TMDL. Included is the source of the pollutant, anticipated/past effectiveness of the management measure (very effective, somewhat effective, not effective), the current status (i.e. enforced, in-progress, planning), and measurable milestones and schedule. Milestones are used to measure progress in attaining water quality standards and to determine whether management measures are being implemented.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
NPDES Permit	Georgia Environmental Protection Division (EPD)	City of Alma WPCP	Permit Issued Jul. 5, 2001	Enforced	Regulatory
Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness		
Dissolved Oxygen	Water discharge and possible leakage	1	Effective		
Measurable Milestones		Schedule		Comments	
		Start	End		
Refer to Permit GA0032328		07/05/01	07/04/06	N/A	
Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
NPDES Permit	Georgia Environmental Protection Division (EPD)	D. L. Lee & Sons Inc. Sewerage System	Permit Issued Dec. 16, 1998	Enforced	Regulatory
Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness		
Dissolved Oxygen	Water discharge and possible leakage	1	Very Effective		
Measurable Milestones		Schedule		Comments	
		Start	End		
Refer to Permit GAU050130		12/16/98	11/30/03	N/A	

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/ Projected Date	Status	Regulatory/ Voluntary
GA Water Quality Control Act (OCGA 12-5-20) Georgia Groundwater Use Act Georgia Erosion & Sedimentation Act Georgia Comprehensive Planning Act Georgia River Basin Management Planning Act	Georgia Department of Natural Resources (DNR), Environmental Protection Division (EPD).	Laws authorizing Georgia EPD to control water pollution, eliminate phosphate detergents and regulate sludge disposal; to require permits for agricultural ground and surface water withdrawals; to prohibit siltation of state waters by land disturbing activities and require undisturbed buffers along state waters; to require land-use plans that include controls to protect drinking water supply sources and wetlands; to require river basin management plans on a rotation schedule for all major river basins.	11/64	Enforced	Regulatory

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
Dissolved Oxygen	Ungoverned point source discharge and nonpoint source runoff pollution loads.	1	Very Effective

Measurable Milestones	Schedule		Comments
	Start	End	
Compliance with regulations to control water pollution including identification and implementation of Best Management Practices (BMPs).	11/64	Continuous	N/A

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Domesticated and Commercial Animal/Livestock Excrement Disposal and Management Program	Individual	Encourages individuals to correctly dispose and manage excrement from animals/livestock operations.	2006	Planning	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Domesticated animals and Commercial Livestock Production	1	Effective if BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants contributing to impaired DO in impacted waterways.	2006	Continuous	University of Georgia Extension Agent must provide educational opportunities if BMP is to become effective.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
CAFO Regulations Land Application System Permits	Georgia DNR EPD General NPDES Permits	Permitting requirements for Concentrated Animal Feeding Operations and Land Application Systems with liquid manure.	2002	Pending	Regulatory

Reduction in the measurable amount of pollutants that contribute to impaired DO in impacted waterways.	1993	Continuous	N/A

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Septic Tank Management Program	Southeast Georgia RDC, 7 Rivers RC&D and local governments in watershed.	319 grant to delineate failing septic systems	2004	Planning	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Effluent leakage from collection lines	1	Effective if BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants contributing to impaired DO impacted waterways.	2004	Continuous	Southeast Georgia RDC will work with 7 Rivers RC&D, City of Alma and Bacon County to apply for 319(h) grants to delineate and repair or replace malfunctioning septic systems.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Agricultural Best Management Practices (BMPs)	NRCS (7 Rivers RC&D) and University of Georgia Extension Service	Leads effort in agricultural water quality program, develops agricultural BMPs educational and monitoring efforts.	1987	In-Progress	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Waterbodies* Impacted	Anticipated or Past Effectiveness
DO	Animal facility runoff, pesticide/herbicide management, irrigation runoff management and manure applications.	1	Effective

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants contributing to impaired DO in impacted waterways.	1987	Continuous	NRCS and University of Georgia Extension Agent must provide continuous opportunities if BMP is to remain effective.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Nutrient Management Program	NRCS (7 Rivers RC&D) and University of Georgia Extension Service	Encourages and educates farmers on the correct usage and amount of fertilizers to maintain high yield and to lessen the impacts of nitrates and phosphates to waterways. Reduces NPS of pollution.	1991	In-Progress	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Waterbodies* Impacted	Anticipated or Past Effectiveness
DO	Natural and manmade fertilizers	1	Effective

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants contributing to impaired DO in impacted waterways.	1991	Continuous	NRCS and University of Georgia Extension Agent must provide continuous opportunities if BMP is to remain effective.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Forestry Best Management Practices (BMPs)	Georgia Forestry Commission	BMP categories include planning for water quality, SMZs, road location, construction, stream crossing and maintenance, timber harvesting, site preparation/reforestation and management/protection.	1999	In-progress	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Silviculture	1	Effective

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired DO in impacted waterways.	1999	Continuous	Georgia Forestry Commission must continuously provide education opportunities for foresters if BMPs are to remain effective.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Power Equipment, Commercial, Industrial, and Personal Product Care Disposal and Management Program	Individual	Encourages individuals to properly dispose of materials that are related to the repair and routine maintenance of power equipment.	2002	On-going	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Equipment cleansing, mechanical repairs and maintenance shops, and individual home auto maintenance and/or repair.	1	Effective

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired DO impacted waterways.	2002	Continuous	Local auto part houses encourage and provide opportunities for individual to dispose of fluids and materials that can't be disposed of by normal fluid or trash disposal methods.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
House Cleaner Disposal and Management Program	Individual	Encourages individuals to properly dispose of household chemicals	2005	Planned	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Household chemicals	1	Effective if program is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired DO impacted waterways.	2005	Continuous	Southland Waste Disposal Inc. must encourage individuals to properly secure and dispose of household chemicals

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Sewer Management Program	Individual	Encourages individuals to routinely inspect sewage system on property.	12/2004	Planning	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Leaking Sewage Lines	1	Effective if BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired Dissolved Oxygen in the impacted waterways.	12/2004	Continuous	University of Georgia Extension Agent must provide educational opportunities if BMP is to become effective.

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Spill/Discharge Control and Cleanup Program	Individual	Encourages individuals to cleanup or control and to report spills.	12/2004	Planning	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Surface Spills or Uncontrolled Discharges	1	Effective is BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired DO in the impacted waterways.	12/2004	Continuous	University of Georgia Extension Agent must provide educational opportunities if BMP is to become effective.

Watershed: Hurricane Creek
HUC10: #0307020110

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
BMP Monitoring	GFC	Within watershed will conduct monthly aerial BMP evaluations to identify recent forestry practices and conduct BMP audit	01/2003	Current	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Silviculture Activities	1	Effective if BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired Dissolved Oxygen in the impacted waterways.	01/2003	Continuous	N/A

Regulation/Ordinance or Management Measure	Responsible Government, Organization or Entity	Description	Enacted/Projected Date	Status	Regulatory/Voluntary
Storm Water Pollution Prevention Plan (SWPPP)	Southeast Georgia RDC, Coastal Conservation Resources, and NRCS	Storm water runoff is part of a natural hydrologic process. However, human activities, particularly urbanization and associated industrial activities, can alter natural drainage patterns and add pollutants to rivers, and streams. Impact is a decline in fish and restrictions on swimming.	01/2003	Planning	Voluntary

Pollutant(s) Affected	Sources of Pollutant(s)	Impacted Waterbodies*	Anticipated or Past Effectiveness
DO	Storm Water Run Off	1	Effective if BMP is implemented

Measurable Milestones	Schedule		Comments
	Start	End	
Reduction in the measurable amount of pollutants that contribute to impaired DO in the impacted waterways.	01/2003	Continuous	Southeast Georgia RDC will, with the assistance of Coastal Conservation Resources, and NRCS, seek funds to assist the City of Alma and Bacon County in the development of Storm Water Pollution Prevention Plan (SWPPP).

POTENTIAL FUNDING SOURCES The identification and discussion of dedicated funding is important in determining the economic feasibility of the above-mentioned management measures.

Funding Source	Responsible Authority	Status	Anticipated Funding Amount	Impacted Waterbodies*
Section 319 (h) of the Clean Water Act	EPA/State of Georgia	Must Apply	N/A	1
Greenspace Funds	Georgia Department of Natural Resources	Must Qualify	Amount calculated by DNR	1
Small Business Technical Assistance Program	Georgia Department of Natural Resources (EPD)	Must Request Assistance	Undetermined-Free Technical Assistance	1
Environmental Quality Incentive Program (EQIP)	NRCS	Must Apply	N/A	1
Unified Watershed Assessment program	NRCS	Must Apply	N/A	1
Conservation Reserve Enhancement Plan	NRCS	Must Apply	N/A	1
Section 604(b) Grants	Georgia Department of Natural Resources	Must Apply	N/A	1

PROJECTED ATTAINMENT DATE

The projected date to attain and maintain water quality standards in this watershed is 10 years from acceptance of the TMDL Implementation Plan by EPD.

MONITORING PLAN

The purpose of this monitoring plan is to determine the effectiveness of the target TMDL and the management measures being implemented to meet water quality standards. List of previous, current or planned /proposed sampling activities or other surveys. Monitoring data that placed stream on 303(d) list will be provided if requested.

Name of Regulation/Ordinance or Management Measure	Organization	Impacted Waterbodies*	Pollutants	Purpose/Description	Time Frame		Status (Previous, Current, Proposed)
					Start	End	
TMDL Evaluation/Monitoring Data	GA EPD/USGS	1	DO	TMDL Evaluation /Monitoring data for Georgia 305(b)/303(d) List	1998	1998	Previous
Water Quality Testing	GA EPD	1	DO	Water Quality Testing/Assessment of water quality.	2003	2003	Proposed
TMDL Evaluation	GA EPD/USGS	1	DO	Monitoring data for GA 305(b)/303(d) list	1998	1998	Previous
BMP Monitoring	GFC	1	DO	Within watershed will conduct monthly aerial BMP evaluations to identify recent forestry practices and conduct BMP.	01/2003	Continuous	Current
Comprehensive Nutrient Management Plan	GA DNR EPD	1	DO	Component of general CAFO/LAS permits to identify and describe practices that are to be implemented to assure compliance with the limitations and conditions of the permit.	03/2002	03/2007	Current
Storm Water Pollution Prevention Plan	Southeast Georgia RDC, NRCS and Coastal Conservation Resources	1	DO	Southeast Georgia RDC will, with the assistance of Coastal Conservation Resources and NRCS, seek funds to assist the City of Alma and Bacon County in the development of a Storm Water Pollution Prevention Plan (SWPPP)	01/2003	01/2004	Proposed
Water Quality Testing	City of Alma	1	DO	Water Quality Testing/Assessment of water quality.	1990	Continuous	Current

CRITERIA TO DETERMINE WHETHER SUBSTANTIAL PROGRESS IS BEING MADE

The following set of criteria will be used to determine whether any substantial progress is being made towards reducing pollutants in impaired waterbodies and attaining water quality standards. Discussion on each criterion is recorded in the space provided. Additional relevant criteria are presented in Comments.

- Percent of concentration or load change (monitoring program) _____

- Categorical change in classification of the stream (delisting the stream is the goal) _____

If monitoring results show that it is unlikely that the TMDL will be adequate to meet water quality standards, revision of the TMDL may be necessary.

- Regulatory controls or activities installed (ordinances, laws) _____

- Best management practices installed (agricultural, forestry, urban) _____

COMMENTS

Watershed: Hurricane Creek
HUC10: #0307020110

Prepared By: Fredrick E. Carpenter Jr.
Agency: Southeast Georgia RDC
Address: 1725 South Georgia Parkway, West
City: Waycross ST: GA 31503
E-mail: fecsegardc@accessatc.net
Date Submitted to EPD: 12/16/02

The preparation of this report was financed in part through a grant from the U.S. Environmental Protection Agency under the provisions of Section 106 of the Federal Water Pollution Control Act, as amended.
